ПРИНЦИПЫ ПОСТРОЕНИЯ ИКОНОК

При построении иконок используем сетку и определяем основные размеры.

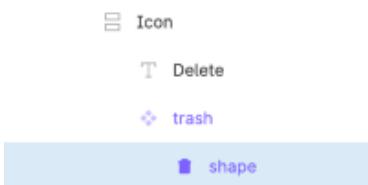

Правила построения просты: квадраты, прямоугольники и круги рисуем по сетке, что важно для консистентности и правильной развесовки иконок. Толщина линий — 2 px. Скругляем углы, оставляем острыми окончания. Так формы рифмуются с логотипом.

Допускается дополнительно скруглять углы, если этого требует реальная форма объекта или нужно дополнительно показать мягкость

Допускаются разрывы при условии, что это два разных объекта

Линии должны быть outlined и склеены в один path (shape). При построении иконки сначала необходимо превратить линии в шейпы, затем при помощи инструмента Union Selecton склеить все элементы в один шейп. Далее, сохранив выделение объекта, необходимо нажать ⌘E (Flatten)

Color Styles

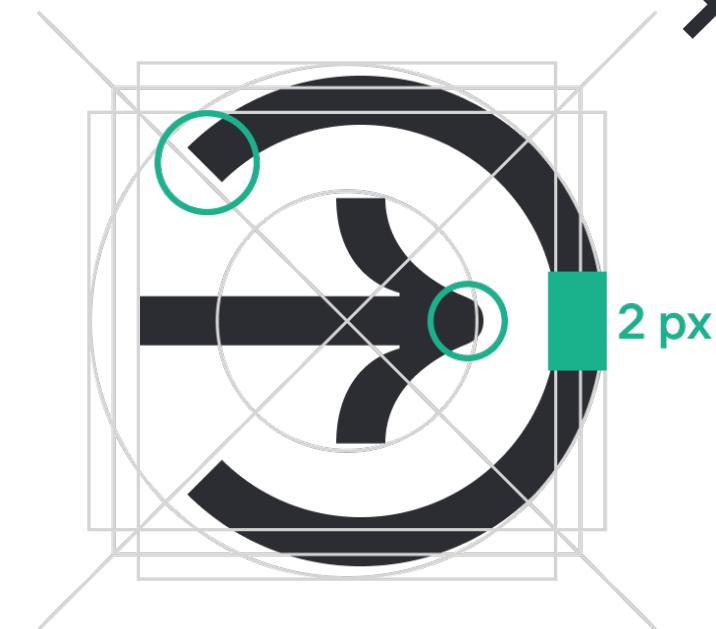

Brand / primary

Цвет иконки должен соответствовать палитре Vienna RDS Colors & Shadows (Brand / Primary)

Иконка должна находиться в соответствующей категории

Допускаются размеры: 24x24, 16x16. Остальные размеры делаются методом скейлинга

Код в svg-файлах не должен содержать ничего кроме тэга <path> код изображения</path>

В редких случаях, где два разных объекта расположены на разных уровнях высоты, у второго объекта допускается делать скосы

Иконки схожей формы должны быть сбалансированы относительно друг друга

Иконка должна быть мастер-символом

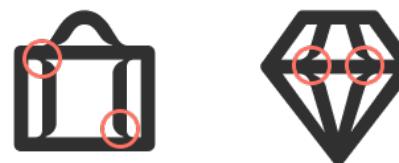

Ловушки для чернил

В местах соединения 2x объектов соединительная линия утонается, образуя характерную шрифту Tomato Grotesk площадку. Уточнения могут отличаться в зависимости от угла наклона и длины соединяющего элемента. Толщина площадки при размере иконки 24px: 0.12px

Дополнительно

Характерные соединения не 2x разных объектов, а линий, рисующих углы или дополнительных объектов, как в примере с ремнем на портфеле

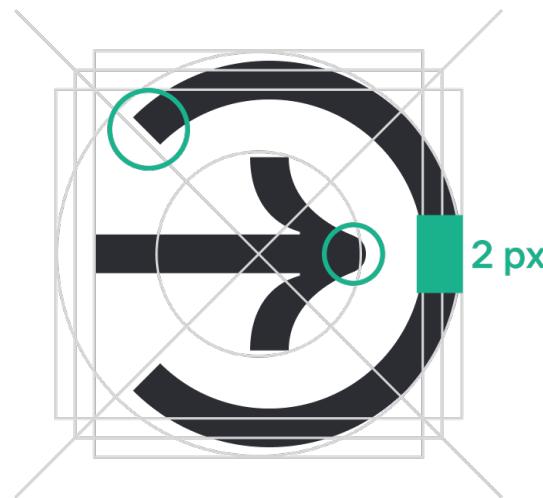

Выдавливание

Выдавливание соединяющейся под 45 градусов линии. Пока такой прием применяется только в стрелках

Icons Guideline

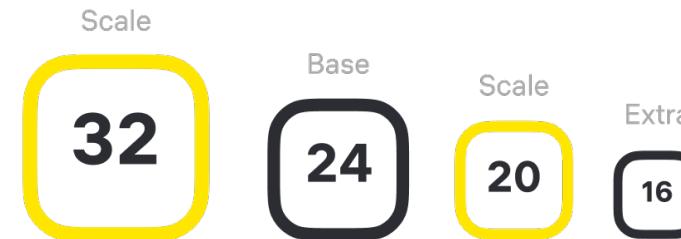

Принципы построения иконок

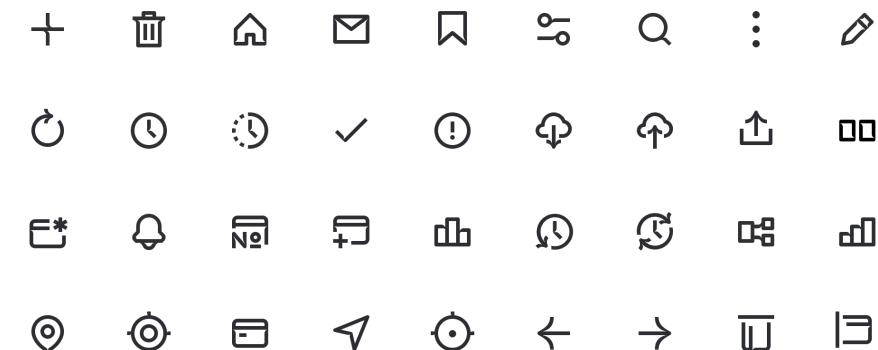

Для соблюдения консистентности и правильной развесовки необходимо рисовать иконку строго по сетке

Базовый размер иконки — 24 px, дополнительный 16x16 px.
Иконка имеет толщину линии 2 px, окончания линий
прямые, углы имеют минимальное скругление

Компонент Icon имеет несколько допустимых
для использования размеров: 32, 24, 20, 16

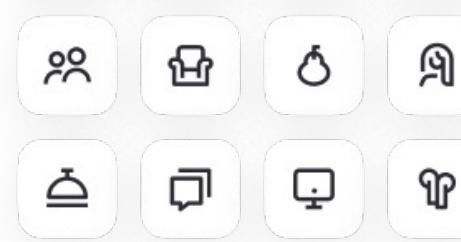

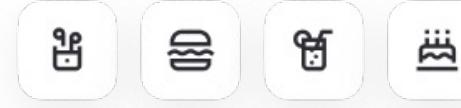

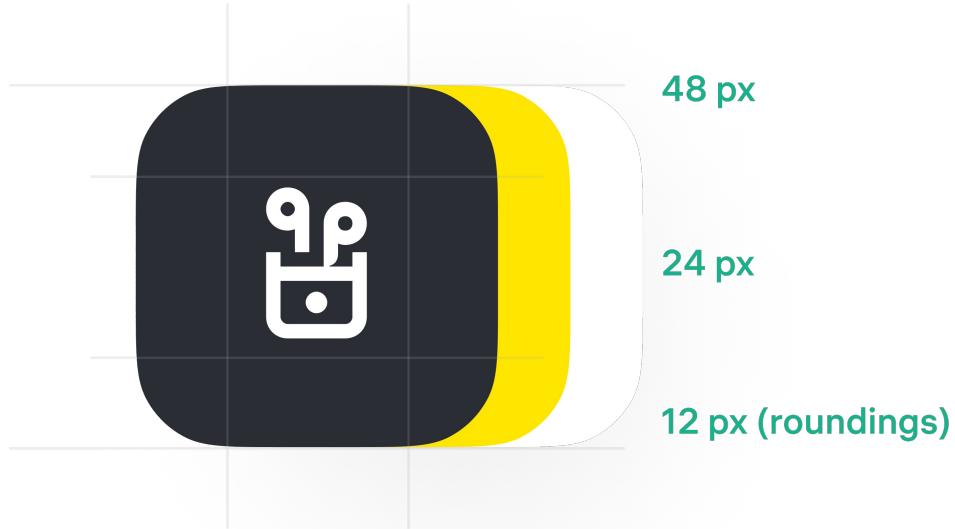

Base 24x24

Extra 16x16

Icons Examples

Черные иконки на желтом фоне
